

IPFS

Inter-Planetary File System

- Each file and all of the **blocks within it** are given a **unique fingerprint** called a **cryptographic hash**.
- IPFS **removes duplications** across the network.
- Each **network node** stores only content it is interested in, and some indexing information that helps figure out who is storing what.
- When **looking up files**, you're asking the network to find nodes storing the content behind a unique hash.
- Every file can be found by **human-readable names** using a decentralized naming system called **IPNS**.

Exercise

Integrate IPFS with Student Management System for uploading the certificates

THANK YOU
